

Expoenergética closes the first addition as a great success

The attendance forecasts were surpassed, with 7,500 visitors from over 50 countries. The media was covered by more than 60 journalists. During the conferences, the seats were occupied in their totality during the three days in more than 60 round tables and conferences. From data collected and the feedback of all the exhibitors on their intention to return in autumn of 2009, we can confirm that the exhibition space of the second edition will be extended significantly.

The chief of a main directorate of the Valencian Agency of Energy (AVEN), Antonio Cejalvo, stated at the inauguration on Monday the 19th of November: "To be the first edition of the fair it has surprised us very pleasingly. There is a high level and amount of exhibitors, who in addition, have very interesting products on exhibition."

Expoenergética and Ecoconstrucción, celebrated in Valencia Fair - with more than 145 direct exhibitors, 300 represented brands and more than 60 conferences surpassed all expectations of the Organization on the first day. More than 3,000 visitors from over 50 countries. Spain, Portugal, Germany and Italy were highly represented. With around 40 journalists credited to the event, the national cover was also very important.

The following day the number of visitors increased to 3,500, which allowed the exhibiting companies to make a great number of contacts. The totality of the 7,500 visitors who took a walk by more than 145 stands of the fair was most professional. The doors closed on Wednesday at 3 in the afternoon, interested people still continued to try and enter.

On the other hand, the conferences were a huge success also, since the seats were occupied in their totality during the three days in more than 60 round tables and conferences in which were presented by more than 70 speakers. Sharpshooting new features of each one of the sectors: fuel batteries, wave energy, solar energy, combined cycles, biomass, power efficiency, consumption, Wind energy etc...

During the exhibition, companies exposed their particular profits of development in their respective fields, like Solar Grammer, Vestas, Iberdrola, Suzlon, Solar Trina, Würth, Natural Gas, Solar Cor and Solar Vidur, and many others.

All in all, with an atmosphere of satisfaction and the intentions to return to the exhibition on the part of most of the exhibitors. Expoenergética confirm to return with its space extended significantly for the next edition in 2009.

Meeting of Technological Transfer

One of the outstanding highlights on Tuesday the 20th was the “Meeting of Technological Transfer”. Exceeding expectations, with more than 100 enrolled companies from different parts from Spain, Romania, Italy, Czech Republic, and Lituania.

The objective was to constitute a platform of international character for companies and related research centres interested in making contact with the each other and agreements of technological cooperation. Goals that were reached: 95 technologies were demanded and supplied. 150 interviews were celebrated, 20% of which had international character. As far as the participants, they counted on the presence of companies, technological centres and universities.

For all concerned, the University of Alicante, the Network of Technological Institutes of Valencian Comunidad (REDIT), members of IRC CENEMES and the organizers of the meeting. We trust that initial fruit of these contact agreements of technological cooperation for the development of projects of R+D are carried out and some of the technological problems are solved.
